

# GANZ ZR8 Network Video Recorder(NVR) Quick Start Guide

**Issue**

**V1.1**

**Date**

**2016-02-22**

# Precautions

## Precautions

Fully understand this document before using this device, and strictly observe rules in this document when using this device. If you install this device in public places, provide the tip "You have entered the area of electronic surveillance" in an eye-catching place. Failure to correctly use electrical products may cause fire and severe injuries. To prevent accidents, carefully read the following context:

## Symbols

This document may contain the following symbols whose meanings are described accordingly.

Symbol	Description
 <b>DANGER</b>	It alerts you to fatal dangers which, if not avoided, may cause deaths or severe injuries.
 <b>WARNING</b>	It alerts you to moderate dangers which, if not avoided, may cause minor or moderate injuries.
 <b>CAUTION</b>	It alerts you to risks. Neglect of these risks may cause device damage, data loss, device performance deterioration, or unpredictable results.
 <b>TIP</b>	It provides a tip that may help you resolve problems or save time.
 <b>NOTE</b>	It provides additional information.

### **DANGER**

To prevent electric shocks or other dangers, keep power plugs dry and clean.

### **WARNING**

- Strictly observe installation requirements when installing the device. The manufacturer shall not be held responsible for device damage caused by users' non-conformance to these requirements.

- Strictly conform to local electrical safety standards and use power adapters that are marked with the LPS standard when installing and using this device. Otherwise, this device may be damaged.
- Use accessories delivered with this device. The voltage must meet input voltage requirements for this device.
- If this device is installed in places with unsteady voltage, ground this device to discharge high energy such as electrical surges in order to prevent the power supply from burning out.
- When this device is in use, ensure that no water or any liquid flows into the device. If water or liquid unexpectedly flows into the device, immediately power off the device and disconnect all cables (such as power cables and network cables) from this device.
- Do not focus strong light (such as lighted bulbs or sunlight) on this device. Otherwise, the service life of the image sensor may be shortened.
- If this device is installed in places where thunder and lightning frequently occur, ground the device nearby to discharge high energy such as thunder strikes in order to prevent device damage.

**CAUTION**

- Avoid heavy loads, intensive shakes, and soaking to prevent damages during transportation and storage. The warranty does not cover any device damage that is caused during secondary packaging and transportation after the original packaging is taken apart.
- Protect this device from fall-down and intensive strikes, keep the device away from magnetic field interference, and do not install the device in places with shaking surfaces or under shocks.
- Clean the device with a soft dry cloth. For stubborn dirt, dip the cloth into slight neutral cleanser, gently wipe the dirt with the cloth, and then dry the device.
- Do not jam the ventilation opening. Follow the installation instructions provided in this document when installing the device.
- Keep the device away from heat sources such as radiators, electric heaters, or other heat equipment.
- Keep the device away from moist, dusty, extremely hot or cold places, or places with strong electric radiation.
- If the device is installed outdoors, take insect- and moisture-proof measures to avoid circuit board corrosion that can affect monitoring.
- Remove the power plug if the device is idle for a long time.
- Before unpacking, check whether the fragile sticker is damaged. If the fragile sticker is damaged, contact customer services or sales personnel. The manufacturer shall not be held responsible for any artificial damage of the fragile sticker.

## Special Announcement

All complete products sold by the manufacturer are delivered along with nameplates, operation instructions, and accessories after strict inspection. The manufacturer shall not be held responsible for counterfeit products.

This manual may contain misprints, technology information that is not accurate enough, or product function and operation description that is slightly inconsistent with the actual product. The manufacturer will update this manual according to product function enhancement or changes and regularly update the software and hardware described in this manual. Update information will be added to new versions of this manual without prior notice.

This manual is only for reference and does not ensure that the information is totally consistent with the actual product. For consistency, see the actual product.

# 1 Specifications

Parameters		Description
System specification	CPU	Embedded SOC chip for NVR
	Operating system	Embedded Linux operating system
	Hard disk interface	One hard disk interface, which supports SATA2.0 and a capacity of up to 4TB
	Network interface	One 10 Mbps/100 Mbps adaptive Ethernet interface Four PoE 10 Mbps/100 Mbps Ethernet interfaces, compliant with the IEEE802.3af standard
	Audio interface	N/A
	Video interface	One HDMI output interface One VGA output interface Support for Synchronous output Support for 1920×1080, 1280×720, and 1024×768 output resolution
	USB interface	2×USB2.0
	Alarm interface	N/A
	RS485	N/A
	RS232	N/A
Performance specification	Network video input	4-ch
	Access bandwidth	24Mb/s, the main stream supports 18Mb/s
	Output bandwidth	36Mb/s
	Synchronous playback	1080p, 4-ch
	Video resolution	1080p/720p/D1
	Local preview	4-ch, support 1/4 split-screen video playing window, 1/4 screen support 1080p, 720p and D1 decoding display, support video sequencing playing.
Environmental features	Power supply	DC 48V/1.35A
	Power consumption of	≤ 5W

	the mainboard	
	PoE power consumption	$\leq 40$ W
	Operating temperature	-5°C–50°C
	Operating humidity	$\leq 90\%$ (non-condensing)
Physical features	Physical size	255 mm × 235 mm × 45.5mm (length × width × height)
	Net weight	926g (excluding the hard disk)
	Installation mode	Desktop or wall-mounted

# 2 NVR Networking

The network video recorder (NVR) has five network interfaces, with one 100 Mbps network interface and four PoE network interfaces. The four PoE network interfaces can be connected to devices within a distance of less than 100 meters.

Connection must be made via standard cables.

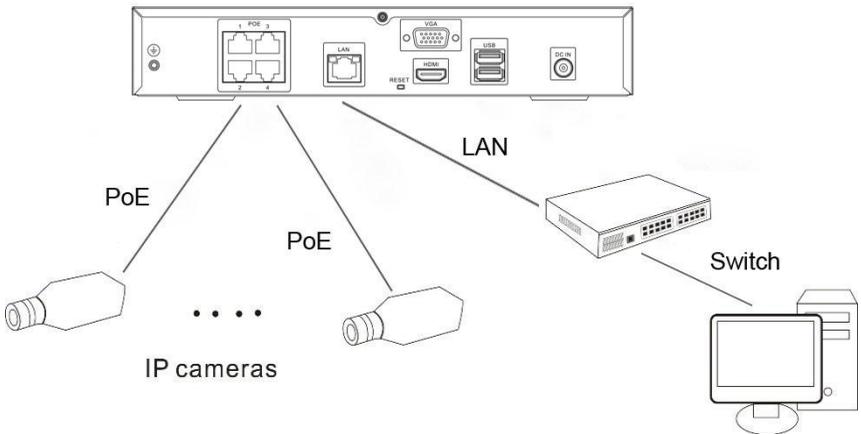

## PoE Network Interfaces

After the PoE network interfaces are connected to IP cameras, the NVR automatically adds the IP cameras and enables 7\*24 recording.

## 100 Mbps Network Interface

The 100 Mbps network interface can be connected to other network devices. Figure 2-1 shows the network topology of the NVR.

Figure 2-1 Network topology of the NVR

# 3 Hard Disk

## 3.1 Precautions

### CAUTION

- Formatting will clear all video data on the hard disk. Use this function only when necessary.
- Be sure to uninstall the hard disk before removing it from the NVR during runtime; otherwise, the hard disk may be damaged or data may be lost.
- The NVR must be connected to a stable power supply during runtime; otherwise, the hard disk may be damaged or data may be lost.
- The maximum capacity of a single hard disk cannot exceed 4 TB.

## 3.2 Hard Disk Recommendation

Seagate or Western Digital hard disks which are highly stable and inexpensive are recommended.

## 3.3 Video Storage Duration

Table 3-1 Video storage duration

Maximum Hard Disk Capacity	Maximum Bit Rate	Video Storage Duration
1 × 4 TB	18 Mbps	21 days

Formulas for calculating the video storage duration:

Step 1 Use the following formula to calculate the storage capacity **q** (unit: MByte) required to record a single video per hour:

$$q = d/8 \times 3600/1024$$

**d** indicates the bit rate (unit: Kbit/s).

Step 2 Use the following formula to calculate the video storage duration **t** (unit: day)

$$t = \frac{n \times w}{q \times h \times c}$$

**w** indicates the capacity (unit: Mbyte) of a single hard disk.

**n** indicates the number of disks.

**h** indicates the recording duration per day.

**c** indicates the number of video inputs of the NVR.

Table 3-2 shows examples of video storage duration (**h** is 24 hours).

Table 3-2 Examples of video storage duration

Hard Disk Capacity	Bit Rate	Video Count	Video Storage Duration
1×4TB	D1, 1.5Mbps	4	64 days
1×4TB	720p, 3Mbps	4	32 days
1×4TB	1080p, 4.5Mbps	4	21 days

#### NOTE

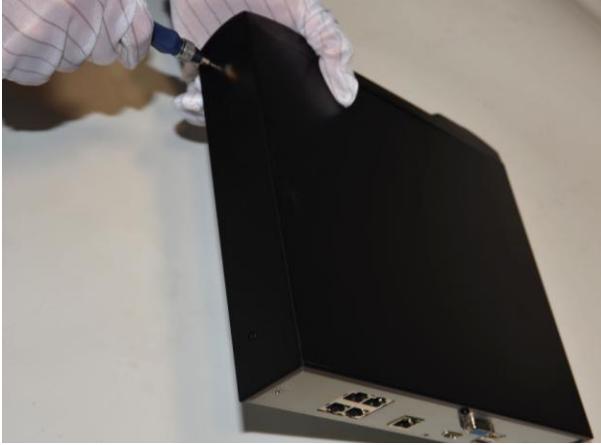

The data listed in the preceding table is only for your reference. The recording time estimate may be different from the actual recording time. The user shall be liable for any loss incurred as a result thereof.

## 3.4 Hard Disk Installation

Take the following steps to install a hard disk:

- Step 1 Unscrew the four fixing screws on both sides and one fixing screw on the back, then remove the upper cover, as shown in Figure 3-1.

Figure 3-1 Removing the upper cover

Step 2 Take out the hard disk fixing screws and silicone cushion included in the accessory package, route the fixing screw through the silicone cushion, and install it to the screw holes, as shown in Figure 3-2.

Figure 3-2 Installing the hard disk fixing screw

**NOTE**

- During the installation, ensure that the large disc of the silicon cushion close to the hard disk screw holes.
- Please install the hard disk fixing screws on the screws holes far away from the power supply interface.

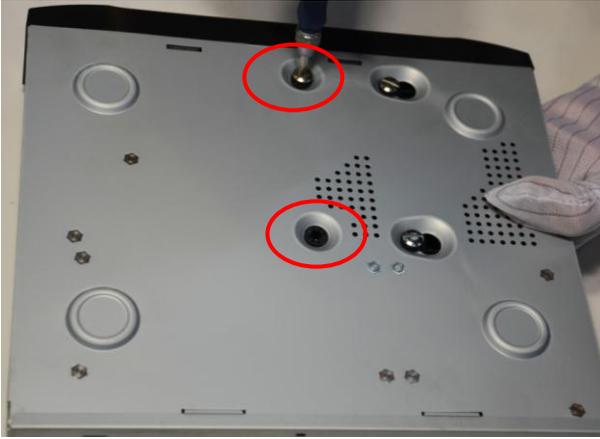

Step 3 Route the hard disk fixing screws through the holes on the base, push the hard disk to the appropriate position on the left, as shown in Figure 3-3.

Figure 3-3 Inserting the hard disk

Step 4 Turn the device over, and fasten the rest two hard disk fixing screws, as shown in Figure 3-4.

Figure 3-4 Fixing the hard disk

Step 5 Insert the hard disk data cable and power cable, put on the upper cover, and fasten the fixing screws, as shown in Figure 3-5.

Figure 3-5 Inserting the hard disk cable

# 4 Operation Instruction

## 4.1 Front panel

Figure 4-1 shows the front panel of the NVR. Table 4-1 shows the description of front panel.

Figure 4-1 Front panel

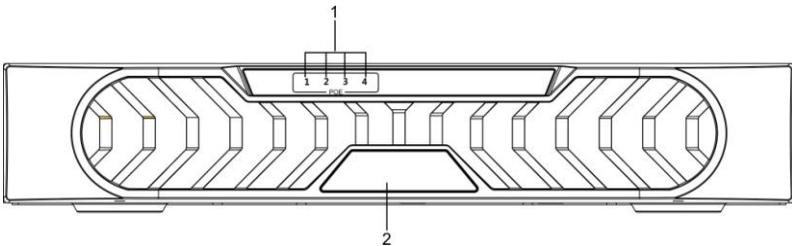

Table 4-1 Elements of the front panel

NO.	Element	Description
1	PoE indicator	PoE network status indicator This indicator flashes when data is transmitted.
2	PWR	Power indicator When the NVR is operating, the PWR indicator is steady on. When the NVR is shut down, the PWR indicator is turned off.

## 4.2 Rear panel

Figure 4-2 shows the rear panel of the NVR and the interfaces on it. Table 4-2 shows the description of front panel.

Figure 4-2 Rear panel

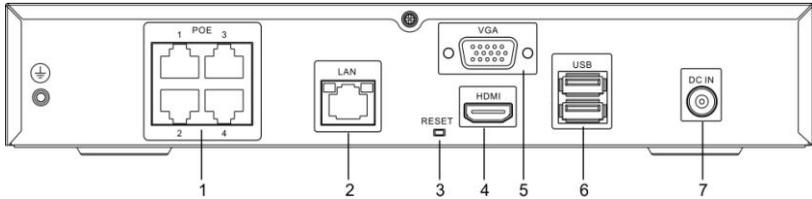

Table 4-2 Elements of the rear panel

NO.	Name	Description
1	PoE network interface	Four PoE network interfaces
2	LAN	RJ45 10 Mbps/100 Mbps adaptive Ethernet interface
3	RESET	Factory reset button
4	HDMI	Video output interface
5	VGA	
6	USB	Supports connection to a USB mouse and keyboard.
7	DC power interface	Connected to an external power adapter

## 4.3 Startup

Before starting the NVR, ensure that the NVR is connected to a power supply.

When the NVR is connected to a power supply, it starts automatically upon the initial power-on.

### CAUTION

- Before starting the NVR, ensure that the NVR is connected to a power supply properly and a monitor is connected to the HDMI or VGA interface of the NVR correctly.
- The NVR may not operate normally when a power supply exception occurs. Damage to the NVR would possibly occur in extreme situations. To avoid this, the user is advised to use a regulated power supply.

When the NVR is started, the power indicator becomes steady on and the NVR starts a self-test and displays the test result on the screen. The startup process takes about 2 minutes.

When the hardware abnormality is detected, the self-test screen stays on. You can click **continue** or **shutdown** in the lower right corner of the screen. If you click **continue**, the NVR enters the login screen.

### NOTE

The hard disk of the NVR must be provided by the user. Hard disk detection is performed during startup. If the detection fails, possible causes include:

- The hard disk is new and unformatted. In this case, format the hard disk based on chapter 5 “Quick Setup”
- The hard disk is formatted, but the file system is inconsistent with the one supported by the NVR.
- The hard disk is damaged.

## 4.4 Shutdown

To shut down the NVR, click  in the upper right corner of the main screen. The shutdown screen is displayed, as shown in Figure 4-3.

Figure 4-3 Shutdown page

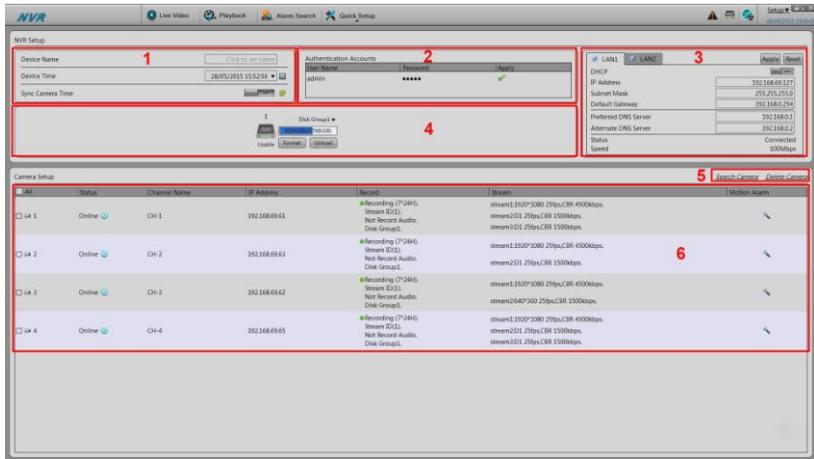

Enter the correct password and click **Shutdown**. When authentication is successful, the shutdown successful page is displayed, then cut off the power.

# 5 Quick Setup

Quick setup provide NVR network configuration, disk management, time setting, IP camera search, video configuration, camera network configuration, stream configuration, and mobile detection configuration.

Figure 5-1 shows the quick setup screen.

Figure 5-1 Quick setup screen

## Description

### 1. NVR basic information and time synchronization

- Basic information of the NVR

You can set the name and system time of the NVR.

- Time synchronization of IP cameras: It can be done manually or automatically.

If the manual mode is selected, click  to synchronize the time of IP cameras. If the auto mode is selected, the NVR synchronizes the time of IP cameras automatically.

### 2. Authentication accounts of managed cameras

 **CAUTION**

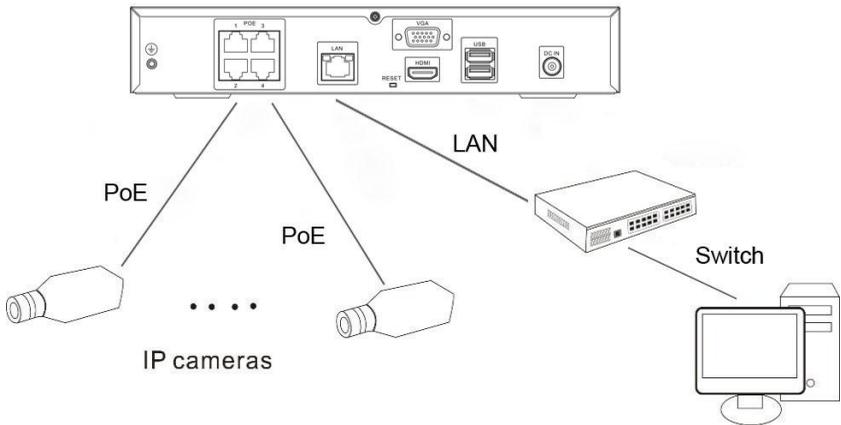

Only successfully authenticated cameras can be used normally. Before adding a camera, add the authentication account and password of the camera to the list.

To log in to an IP camera, you need to enter the correct authentication account. Only successfully authenticated IP cameras can be managed. Double-click the user name and password text field to modify the user name and password.

3. NVR network configuration

- The default IP address of the NVR is: 192.168.1.167.
- You can enable automatic IP address acquisition and set the IP address, subnet mask, default gateway, and DNS address of the NVR. The network connection status and speed are displayed in real time. For details about the parameters, see the *Network Video Recorder (NVR) User Guide*. Figure 5-2 shows the network topology of the NVR.

Figure 5-2 Network topology of the NVR

4. Hard disk management

**CAUTION**

- Formatting will clear all video data on the hard disk. Use this function only when necessary.
- Be sure to uninstall the hard disk before removing it from the NVR during runtime; otherwise, the hard disk may be damaged or data may be lost.
- The NVR must be connected to a stable power supply during runtime; otherwise, the hard disk may be damaged or data may be lost.

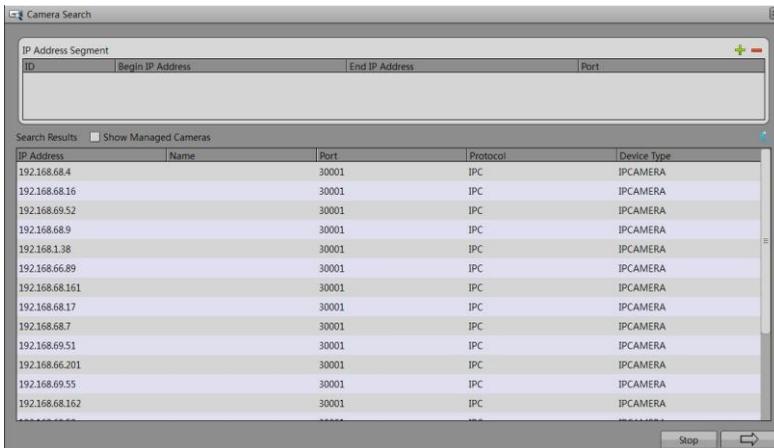

You can manage the hard disk of the NVR as follows:

- Format the hard disk. Click **Format**. In the displayed dialog box, click **Yes**.
- Check the status of the hard disk (usable, abnormal, unformatted, and unavailable).
- Check the used space and total space of the hard disk.

### 5. Camera search and deletion

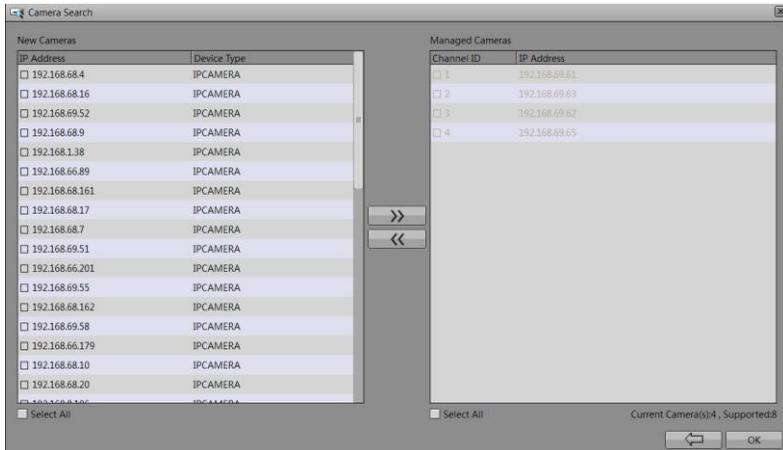

When you need to search camera for management, click **Search Camera**, the **Camera Search** page is displayed, then click **Scan**, it will scan for the camera automatically, as shown in Figure 5-3.

Figure 5-3 Camera searching page

Click , the camera selecting page is displayed as shown in Figure 5-4. Select the cameras you want and then click **Ok** to complete selection of IP cameras.

Figure 5-4 Camera selecting page

To remove managed cameras, click   1 in the camera list, select the cameras to be removed, and click **Delete Camera**.

## 6. IP camera setup

You can view the status of an IP camera and set the name, IP address, recording policy, stream parameter, and motion detection parameter of the IP camera.

- Viewing the status of an IP camera

The camera status may be Online, Offline, and Incorrect account. For an online IP camera, click  to view live video.

- Changing the channel name

Enter a channel name in the **Name** text field.

- Setting a recording policy

Click the recording policy to be modified. The **Recording Policy Configuration** page is displayed. For how to set a recording policy, see the *Network Video Recorder (NVR) User Guide*.

- Setting a stream

Click the stream to be modified. The **Stream** page is displayed, as shown in Figure 5-5.

Figure 5-5 Stream page

The screenshot shows a window titled "Stream" with the following settings:

Stream ID	1
Name	stream1
Video Encode Type	H.264 High Profile
Audio Encode Type	G711_ALAW
Resolution	1920x1080
Frame Rate(fps)	25
I Frame Interval(Unit: Frame)	50
Bit Rate Type	CBR
Bit Rate(kbps)(500-12000)	4500
Apply to all the same devices	<input checked="" type="checkbox"/> On

At the bottom of the window are "OK" and "Cancel" buttons.

Set stream parameters, select **On** for **Apply to all the same devices**, and click **OK**. The parameter settings are applied to all IP cameras that have the same resolution as the configured resolution.

- Setting a motion detection alarm

Click the motion detection information to be modified. The **Motion Alarm** page is displayed. Set the arming time and detection zone when the motion detection alarm function is enabled.

# 6 Web Access

The NVR is embedded with a Flash-enabled web server and supports mainstream browsers such as Internet Explorer, Chrome, Firefox, and Safari. Operations such as quick setup, live preview, video playback, alarm search, NVR configuration, and camera configuration can be performed via the web.

The default IP address of the NVR is 192.168.1.167. To access the NVR, enter the IP address of the NVR in the address bar of a web browser, for example, <http://192.168.1.167>.

## CAUTION

- Before accessing the NVR via the web, ensure that the network connection is correct and smooth.
- Identify the interface used in network connection and enter the corresponding IP address in the address bar of your browser.

Step 1 Enter the IP address of the NVR in the address bar of Internet Explorer and press **Enter**. The web-based login screen of the NVR is displayed, as shown in Figure 6-1.

Figure 6-1 Login screen

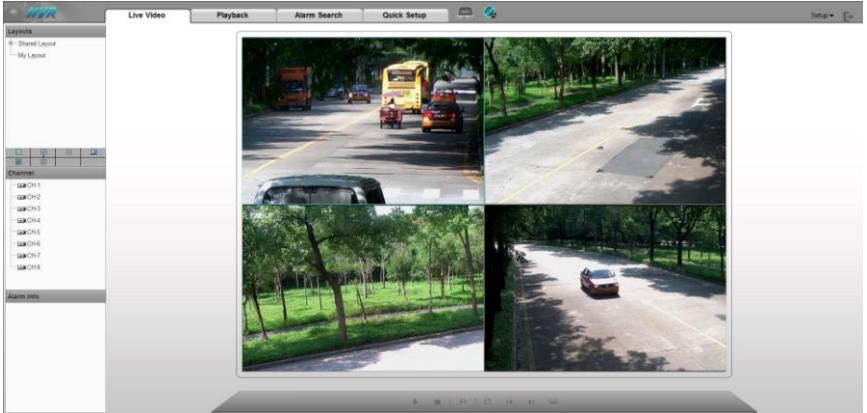

Step 2 Enter the correct user name and password. The main screen of the NVR is displayed, as shown in Figure 6-2.

 **NOTE**

- The superuser is **ADMIN** and its password is **1234** (case-sensitive). Change the password after the first login.
- If incorrect passwords are entered more than three times within 1 hour, the user is locked and prevented from logging in. Only the administrator can unlock the user. For details about unlocking, see the *Network Video Recorder (NVR) User Guide*.
- The superuser **ADMIN** cannot be locked.

Figure 6-2 Main screen

The main screen provides the functions of live video viewing, video playback, alarm search, quick setup, camera configuration, and NVR configuration. For details, see the *Network Video Recorder (NVR) User Guide*.

# 7 FAQ

---

## 1. Why is the NVR self-test screen frozen?

Use the methods below to fix the problem:

Method 1: Check whether the NVR is equipped with a hard disk.

Method 2: Check whether the NVR is equipped with an unformatted hard disk.

Method 3: Check whether the hard disk is damaged.

If a hard disk is not required, Click **continue** in the lower right corner of the screen to resume the startup process.

## 2. Why does the screen display incomplete information or is skewed?

Use the following methods below to fix the problem:

Method 1: Use the automatic adjustment function of the monitor.

Method 2: Click **Adjust** on the login screen. The **Monitor Setup** screen is displayed. For operation details, see chapter 4 "Operation Instruction" of the *Network Video Recorder (NVR) User Guide*.

## 3. Why no image is displayed on the monitor?

Use the following methods below to fix the problem:

Method 1: Check the power supply of the monitor.

Method 2: Check whether the monitor is connected to the NVR correctly.

Method 3: Restart the NVR.

Method 4: Check whether the monitor supports the default resolution (1024×768) of the NVR.

# A Hazardous Substance Declaration

Component	Hazardous Substance or Element					
	Plumbum (Pb)	Mercury (Hg)	Cadmium (Cd)	Hexavalent Chromium (Cr6+)	Polybrominated Biphenyls (PBB)	Polybrominated Diphenyl Ethers (PBDE)
Structural part	×	○	○	○	○	○
Board/circuit module	×	○	○	○	○	○
Cable connector	×	○	○	○	○	○
Accessories	×	○	○	○	○	○

○: indicates that the concentration of the hazardous substance in all homogeneous substances of the component is within the limit specified in SJ/T 11363-2006 **Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products.**

×: indicates that the concentration of the hazardous substance in at least one homogeneous substance of the component exceeds the limit specified in SJ/T 11363-2006 **Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products.**

101-600-0092-02
